

A Donut Atom Nuclear Story - Afterword

I have recently learned much by comparing my earlier books with what I have read in several current science magazine articles. These latest science articles, with their many computer generated illustrations provide data that prove many aspects presented in my published series of Babushka books. They may be read and/or downloaded for free at www.apocalypse2008-2015.com.

I use many examples from familiar things in nature to explain my novel model for the structure of an atom's nucleus and a bit of the theory behind it. Even so, I know it requires a lot of imagination. A little patience would go a long way to reward your reading. I offer insights from my own innovative perspectives proven by my history of successful hi-tech inventions, though I was not educated in lofty places to understand nuclear physics.

When you activate the electrical switch on your wall, the light goes on and even turns on the TV. I ask the question; what is the force inside the wire? Where does it come from?

The answers will be discussed here. The problem is that no one has yet figured out where the energy begins to form or explain where it really comes from. Now for the first time, we can learn about a new logical concept even embedded in the Bible. God reveals it to those interested in knowing about it.

Along the way will also learn a lot about God's Plan for Humanity as recorded in the Bible because this Donut Atom theory has roots in ancient Scripture. As a scientist, I was compelled to share this discovery of a marvelous plan for mankind. I could not keep it quiet, so I tell an original story what nobody has ever heard of before. Maybe it could qualify someday for a Nobel Prize in physics.

This little booklet is not religious. I do not endlessly quote the Bible. I am a retired scientist who must have rational answers to my questions: what is **electricity, gravity, magnetism and life?**

I am not satisfied with the **answers provided by evolution-based science**. Most atheistic university establishments are only interested in selling their opinionated fairytale books to gullible people as facts. Basically the information they sell are only opinions. I look beyond their theories and under the covers. I even discovered how **life** is embedded inside an atom.

Science investigation will always be biased either by an atheistic evolution religion or Bible-based faith, but research tests, hypothesis and proposals must not forget logic in the equation. The conclusions must be compared with the reality that two dimension exist. Denying the spiritual aspect of man will never discover reality. Wrong assumptions can never discover facts.

I do not hide my opinions shaped by information found in the Bible, which prove hard science. If you want to be fair, we should view science from a circular 360° perspective. If you do so, you might even get yourself as excited as I am discovering electricity ... no kidding.

My books came through intuition and research for a balanced perspective AND ARE FREE! God does not charge us to read what he wrote to educate us about what is on the other side. That is the place we all will eventually travel to.

A Mini-Babushka Egg Summary of the Donut Atom Model

People commonly know about and experience three forces in nature that are mostly invisible unless you do something similar to what I did as a kid. (Yes, I once stuck my finger in the electrical socket! I never forget it.) One is magnetism, the other is electrical current, and, if we pulse that current high and low, we get something called voltage. I think it links to gravity, also invisible, and follows a similar pattern.

Many years ago, I worked on SLAG, the Stanford linear accelerator in Palo Alto, CA. I made klystrons, which gave me an opportunity to get involved with advanced science and try to visualize the smallest particles in physics.

I was taught then that the atom is a ball with electrons circling around it, but I have now come to the conclusion that it more resembles a donut with invisible energy proton-positron pairs bunched together that create a current with oscillating high and low voltage going around it at the speed of light. It is like a dog chasing its tail. My model conforms to the electrical hand rule applied in an electrical generator where motion produces magnetism radiating 90° from the flow of moving current creating forms of light energy.

I applied the electrician's three finger rule to my Donut Atom theory, which tells me that magnetism is produced by neutrino-positrons orbiting around the donut hole at the speed of light. It is analogous to a plasma beam inside a cyclotron surrounded with magnetism radiating 90° to the plasma flow all around in a closed circle just like a nuclear donut hole.

In our case the plasma beam is made from a billion pairs of neutrinos-protons that behave like the horse pulling a proton carriage. The neutrino is the energy transformer side like a horse passing on its energy from the Heh Dimension in form of gravity from the infinite light energy spectrum located throughout space. The carriage proton linked to the horse will create spectral lines seen in light spread out in a rainbow spectrum which ultimately crystallize out as mass and condense as elements categorized in the Periodic Table.

The Donut Atom theory further postulated while the sub atomic energy particles circle around like a dog chasing its tail producing magnetism, another energy conversion simultaneously happens just like a generator will produce electricity that ends in light and heat but on a lower level.

It is analogous to a huge universe cyclotron transferring energy. Stand on the top of a dam with a huge lake behind it and observe. It collects water and transfers energy converted by means of a generator made up of spinning magnets below the dam. This process produces another form of energy, which is then reduced. It is then transferred by overland wires to you as electricity to light your house and a refrigerator with the little magnet stuck on the door.

That is not the end of the cycle, as money must be paid to the investor who will build more spinning turbines with another dam behind a lake. The lake needs regular inputs of rain to be refilled on a cycle to keep generating the electricity. That cycle depends on the sun evaporating water to create clouds and rain to fill the lake.

But the cycle keeps going and needs the sun. It is just another transformer station that steps down the infinite energy, but this time the source is a bigger energy generator - the Heh dimension Throne of God. It is stepped down through the core structure of Donut Atoms to appear as measurable gravity. All energy is linked to Donut Atoms' pushing neutrons that come from and go to the universe

A Donut Atom Nuclear Story - Afterword

gravity pool in God's Throne, the source of all energy in the universe.

God's Throne simultaneously fuels three universe theater stages: the Heh, Daleth and Jod dimensions. Neutrons are the mail carriers and must be recharged 100% each cycle, like the water refilling the lake behind the dam. It keeps the universe running like a gigantic cyclotron just as electricity from the dam keeps our civilization running.

The Bible tells us there is a great rainbow above God's throne with spectral lines embedded as recorded by the Apostle John 2,000 years ago. (Revelation 4:2-3) This rainbow above God's Throne was a major discovery for me as it is coupled to the universe cyclotron fueling three universe theater stages. It is also the key to defining a better atom theory - along explaining how a refrigerator magnet looks on the inside with its many Donut Atom dogs chasing their tails. My Kids like that story.

The dual rainbow pictures next reveals a mystery showing us the resonance between a Daleth and Heh dimensions. It functions like a transformer transferring the invisible energy from the heavenly Heh dimension to usable energy in the material universe the Daleth dimension, most specifically for our use on earth. It is analogue when we hit a "C" key on the piano the next octave higher "C" will resonate with a frequency and transfer sound energy we can hear if you are a musician.

That symbiotic relationship between matter and energy was originally formulated mathematically by Dr. Albert Einstein in $E=mc^2$. That is now expanded one notch higher by my Donut Atom model. Physics now makes more rational sense to me than how it was explained years ago at Stanford. I can now understand how gravity, magnetism and energy are converted with life embedded inside the atom, which can be expressed in a new, never before postulated formula: $E\infty=m(+\infty C/-\infty C)^2$.

This concept is totally new to science. The traditional picture of electrons circling around a ball is further advanced to a scientific model where proton-positrons move inside a Donut Atom at the speed of light to produce magnetism, which is squeezed out around and through the donut hole as excess energy must go somewhere and cannot be lost.

That will open the question, "Where does the energy come from to explain why the electrons circle endlessly around the nuclear ball?" It is not yet explained by scientist even building bigger cyclotrons smashing atoms with bigger force.

Fractured atoms like manure stuck on the Nebel chamber walls will never tell how many cows got milked in the barn.

My Donut Atom theory is easier to understand as the apple atom cyclotron plasma beam has many embedded neutrino-protons running around in a circle like a horse and carriage. The running around squeezes magnetism out the walls as only so much space is available, and it becomes electricity 90° to the flow of speeding dogs. Now we have a model where energy is ultimately coming from as it is always recycled at God's Throne via gravity if you understand my thinking.

To sum it up again my Donut Atom model works in reverse from a cyclotron perspective creating magnetism and thus changing into light as seen in the Nebel-chamber indicating particles with a radiating frequency. This produces elements with spectral lines which end up as elements you will find collected in the Periodic Table. In the real Donut Atomic world, similar to a cyclotron squeezed by magnetism every time a portion of a converted magnetic ray passes the donut hole, its magnetism will be compress and then expanded on the other side - happily pulsating, not being pressured, but it will still be forced again through the donut hole. This transfers and converts infinite energy in the form of gravity at a certain frequency level we can use.

Conventional science does not know where atomic energy comes from. It stipulates that the electrons forever orbit the atomic nuclear ball in the center since the Big Bang in the universe 13 billion years ago. But entropy laws teach that that theory is not possible running forever as energy must follow the second law -what runs get hot and loses speed.

But in my Donut Atom model, protons-neutrons move around inside the donut hole endlessly without friction connected to the source producing a force called gravity according to the electrical three-finger rule. However, it goes back and keeps circling inside this gigantic cyclotron again to start the process over in space once more returning to get recharged again.

Energy is never lost according to the First Law of Thermodynamics, so it must go back to the source to be renewed. Just like the water flows down the river into the ocean and returns via clouds and rain in the mountains to start the water cycle all over again.

But the law of entropy teaches us that some energy will be lost; therefore, a little less than 100% actually returns. This is designed by God for our benefit. What is leftover from the gravity cycle becomes free energy to fuel the earth as demonstrated by the natural biological life in our world - now explained with DNA. The reduction of energy according to entropy or Second Law of Thermodynamics is caused by a time parabolic dimension to make the math equation come out right. That makes the inertia in the universe flywheel run slower. It will eventually end, fizzed out in Taw, the last letter in the Hebrew Alphabet Number System.

That would surprise Dr. Einstein. He would turn in his grave to fill in the gap he noticed in his theory. His theory could not explain why light is slowing down. I am sure he would be happy to get this answer presented in this Donut Atom Nuclear Story. Check out the Daleth-Heh and Jod dimensions that explain our universe from God's perspective. Even atheistic science accepts the existence of a multi-dimensional universe.

It combines those three energy forces so they can be transmitted together like the electrician's three finger rule. A spectral analyzer shows that each one is on a different oscillating energy level, bunched together as some donuts are

A Donut Atom Nuclear Story - Afterword

bigger than others. Or, the three invisible forces clustered become mass expressed as elements in the Periodic Table. If two donuts come together, the gravity force in the hole gets two times bigger as they bunch together with magnetic force fields aligning in the same direction, forming a taller hole. Like two magnets stuck together.

We cannot close a story without a good illustration of applied Donut physics and should look at some galaxies with a dark hole in the center. It is a good graphic image of what is really happening inside a Donut Atom. Since Atom Donuts are constantly born and form, their different stages can be observed in a pulse-star with a black hole - a good example of the early development of the donut-galaxy universe. The micro universe must be seen in the macro universe as the same laws apply.

The galaxy hole is like an antenna collecting invisible gravity energy frequencies emanating from the outer universe, which is the metaphysical Heh dimension we call the Throne of Heaven. It sends out infinite, invisible light energy like an ocean throughout the universe, but this energy is scaled down inside the Donut Atom, which becomes a transformer to reduce the infinity light energy to the speed of light of about 186,000 miles/second.

We should be thankful daily for receiving this free energy gift from God to live a little longer. We can analyze its composition through the spectral lines embedded in the rainbow colors coming from space. This set up makes the Daleth dimension possible as a material or physical dimension now better explained with science.

Looking at the Hubble Telescope photographs, we can see the invisible energy sucked into the galaxy hole with gravity acting like an overpowered, gigantic vacuum cleaner. It collects all the invisible energy floating around and evenly distributes it across the universe space dimension, where it becomes concentrated in galactic centers.

Inside those gigantic galactic cyclotrons, we can recognize a scaled down energy converter that drives the neutrino-proton like a horse and carriage. Ultimately, this energy becomes crystallized as material elements used by business to make some money - like the magnet stuck on my refrigerators.

The intense gravity energy is then transferred according to a reversed three-finger electrical rule, 90° to the direction of suction, to generate a current with transformed magnetism. That propels the invisible neutrons pushing and chasing the protons around the apple slices inside the Donut Atom from large diameter to small diameter at the speed of light, which transfers energy scaled down to a lower level crystallized out as elements seen in spectral lines of the Periodic Table.

Think. It is like magnets passing a conductor in a generator: they create an electrical current, which is demonstrated by a light bulb plugged into the socket. We can turn the turbine faster - over 60 hertz - along the invisible spectrum going up the frequency curve of TV, radio frequencies, etc. to the visible light of seven rainbow colors, and past the visible range and beyond as high up as alpha and gamma rays.

In fact, it can go even faster to beyond material manifestation marked with ∞ energy spectrum in science. That would create higher energy in the generator with a ∞ billion-billion volts. The Donut Atom model is just reversed like a generator or a motor can be, but scaled down for our use.

Some scientists may not accept my idea that the atom is shaped like a fat round apple because their thinking needs electrons for the old model. No problem. I have not

investigated how negatively charged electrons might be sucked around the apple ball as the magnetic field turns in conjunction with them. That could explain why electrons are moving as the magnetic field is moving, too with the positively charged protons to produce polarized magnetism.

The accepted atom model says that if the nucleus is the size of a cherry the next electron is 3 miles away, meaning the electrical field greatly affects others in the neighborhood. They made tests and discovered that the forces communicate with each other over long distances at speeds much faster than the speed of light, which surprised them. The commonly accepted model keeps them from postulating better explanations. The size and strength of a magnetic field depends on how the apple donut atoms clump smaller and larger like magnets to vary the size. It remains for the valence department to explain the rules of Donut Atom spooning.

Galaxy Pictures Demonstrate the Donut Atom Model

Seeing Galaxies in space is visual demonstrating what a Donut Atom looks like, as the same electrical three finger rule law applies to both dimensions either in the Heh and Daleth dimension or this micro- or macro-creation.

When I saw these pictures, I sequenced them according to the Donut Atom model. You be the judge! Compare the frozen pictures in the time dimension against the background of now static universe photographed from the Hubble telescope.

After correcting an initial problem with the lens when the Hubble Space Telescope was first launched in 1990, the floating astro-observatory began to relay incredible pictures of the "final frontier" back to Earth.

Recently, astronauts voted on the top photographs taken by Hubble in its 16-year journey so far. Remarking in the article from the Daily Mail, reporter Michael Hanlon says the photos "illustrate that our universe is not only deeply strange, but also almost impossibly beautiful."

Astronomers Selected the Top Ten Most Amazing Pictures Taken by Hubble Space Telescope in Last 16 Years.

Cone Nebula

The part pictured here is 2.5 light years in length (the equivalent of 23 million return trips to the Moon). The Cone Nebula presents a pregnant galaxy giving birth. It is like a corral reef spitting out billion Donut Atom babies ticking to create more galaxies in an expanding universe.

A Donut Atom Nuclear Story - Afterword

One Donut Atom Born – top view. Notice how the gravity center of polarity separates the Heh dimension from the Daleth dimension. This picture shows Nebula NGC 2392, called Eskimo. It is 5,000 light years from Earth.

The next two pictures illustrate galactic separation. Notice how they look like cell division: two galaxies forming like a cell nucleus dividing. Saturated Donut Atom protons repel each other to separate in the middle instead of spooning together.

The next pictures demonstrate the formation stage with Proton-Neutrino polarization. It is the same applied physics whether a Donut Atom or a galaxy.

The pictures above and below show the Hourglass Nebula, which is 8,000 light years away. It is a model of a Donut Atom forming sucking gravity infinite energy in its center.

I hope you enjoyed the Hubble Telescope's top ten greatest space photographs and my notes along the side.

A Donut Atom Nuclear Story - Afterword

Explanation of the Front Cover

The front cover of my Donut Atom book exhibits the parabolic time dimension formula suspended between two Hebrew letters, Heh (ה) and Daleth (ד). These letters show a polarized exchange in an energy equation that connects the metaphysical-spiritual universe dimension and is invisible to mortal eyes. It is joined to the material side of creation but still controlled by the laws of physics.

This diagram basically illustrates the laws of a transformer that reduces or converts infinite energy to a lower level. It is empowered by same forces we see at work in DNA, which is organized by complex intelligence. In a nutshell, my Donut Atom Model spells out an unusual story that has never been proposed in the halls of education.

The book's front cover focuses on the two Hebrew letters Heh (ה) and Daleth (ד). They are connected by electromagnetic lines of force. Looking at it from a perspective of simple strokes to make the letter, both letters have a single horizontal line at their tops. In the ancient Semitic (Arabic or Hebrew) world, anything above the horizontal line is symbolized as God - the divine Creator, the invisible One God. Nothing can exist beside God.

There are no symbols above the line, but below it, a vertical line descends along the right side in both letters. It represents the divine extension of another world emanating from the One God. It signifies the new beginning stated in Genesis when God created. In the Heh (ה), there is a second, unconnected vertical line under the horizontal line on the left side. It sits in mirror image to the connected line on the right just as the earthly dimension of this time is an image of the heavenly Heh dimension.

The first verse in Genesis announces God's Plan for Humanity on earth in the midst of Heaven. The Bible provides instruction and answers the thousands of questions intelligent people ponder and eventually ask. The Hubble telescope, mankind's wonderful "eye in the sky" has revealed to our ever curious species where Heaven begins. Its telescopic lens continues to probe ever further. God, in Genesis gets straight to the point by describing how this universe is fuelled by (∞) infinite light invisible to us.

Human eyes are calibrated to see only the colors of the rainbow - the seven-spectrum frequency. Infinity expands far beyond gamma-beta rays and will be explained later. Invisible gravity is another form of infinite energy. The infinite light is cycled in God's creation within an embedded parabolic time dimension. This mystery is fully explained in my Donut Atom book.

Genesis 1:6 has always been poorly translated as water, like (Mem) separating the firmament. It has a connotation of an *Ausdehnung* (German) and should still be linked to the first verse that states "heavens above, earth below."

Theologians believe it must refer to the water in clouds (above) and the ocean (below). But misunderstanding the Hebrew Alphabet Number system (HANS) causes problems when deciphering God's creation story from a scientific perspective. Many theologians still adhere to false doctrines taught since the Middle Ages. HANS divides it into two dimensions - Heh (ה) and Daleth (ד) - to provide a better understanding of God's creation.

Looking closer at what the ancient Hebrew letters reveal, we find the vertical line descending from the right end of the letter (ה) Heh's horizontal line. It is mirrored by, but not connected to, the vertical line on the left side, which is separated from the horizontal line. As the unconnected left vertical line is a mirror image of the right, the earthly dimension of this time is a separate, reverse image of the heavenly Heh dimension. The material Daleth dimension represented by the left line is separated from, but still indirectly connected to, God via the infinite gravity energy embedded in every atom. I call it the (+One) force because the natural universe is mirrored in the invisible heavenly Heh dimension reality.

The two vertical lines (||) in the letter Heh express these two dimensions. God is now experienced or known visibly through His creation which is identified with the second Hebrew letter "duality" or Beth, meaning "create". It is located below the horizontal line as it is dual in nature just as God, the Father and the Son are illustrated in nature with examples ranging from the caterpillar-butterfly life cycle and any two-cycle seed system. The macro worldview, an expanding and accelerating-decelerating universe in the light-time dimension, will be further investigated and explained in this book.

In Hebrew, the Daleth (ד), represents the concept of "this world-in this time." It does not have a left vertical leg making it incomplete or only one dimensional. The material world was made by God as represented in the letter's one horizontal line. When the left vertical line in the Heh (ה) is connected to the horizontal line above it forms Chet (ח) representing the age of judgment and transition to the end.

Semitic letters and words flow from right to left just like hieroglyphic picture symbols; therefore, the addition of a short horizontal line progressing from the left vertical line (towards the right) joins together into one to become the last Hebrew letter, T=Taw (ת) meaning "the end of time in eternity." It also symbolizes the age when all creation, material and spiritual / metaphysical, will be united under God's direct rule previous to the creation of a new Heaven and new Earth in the coming Jod dimension.

I will end my story by comparing the first Genesis report with the Donut Atom story and exploring how on the third creation day plants and vegetation grew without the sun, which only appeared on the fourth day. This can now be explained due to the appearance of Infinite light. It was scaled down by a time dimension on the first day, which has now been scientifically explained in this, my Sixth Babushka book, **A Donut Atom Nuclear Story**.

In it I prove that a higher speed-of-light existed in prehistoric times. We can measure it today. My conclusions are based on the fact that a larger concentration of atmospheric oxygen causes larger cell sizes as seen in fossilized bone structures. This observation translates into two or three times the energy fuel for the ancient biosphere. You can find it in geology and in coal deposits as well as in the many bubbles embedded in amber or read magazines¹.

The only explanation for this fact is that the initial speed-of-light had to be faster than at present, which consequentially resulted in the accelerated growth of ancient plants and animals. Being infinite in strength, the bio-conversion process when reduced by a parabolic time dimension could have been as short as reported in Genesis - a 24-hour "shamayim" (Heavenly) creation day.

¹ **The Iron Records of Earth's Oxygen**, Scientists are decoding the geological secrets of banded iron formation, by Sid Perkins. **Science News**, June 20, 2009.

A Donut Atom Nuclear Story - Afterword

This would be triggered when God activated the dimension of time and put his plan in motion for people to appear in 4068 BC. Currently accepted science can only postulate an opinion that projects this timeframe as billions of years. They have no supporting facts. My Donut Atom model ends this confusion.

For example, light was reduced exponentially on the 4th day within the dimension of time, thus converting infinite light into a less intense and usable fuel source. This occurred when God moved the Earth in the Milky Way. Subsequently,

the earth was pulled from the center of the "universe" into our solar orbit. Galileo got into serious trouble when he pointed this out to the establishment of his time.

In his infinite wisdom, God used the finite sun as another energy transformer so that growth rate of vegetation would decrease. By using a lower energy level it is much more useful for mortals. This is the principle by which a million volts is reduced by a transformer on a telephone pole to the 110 volts that every house requires and utilizes.

The growth rate of vegetation was stepped down by reducing the energy input by lower light intensity. The speed-of-light had slowed down to about 186,000 miles per second as measured in 2009. But light speed was different in ancient times as can be seen in geology and coal deposits using a microscope.

Like a dimmer switch used in our living-rooms set on low, light has slowed down. Dr. Einstein wondered about the energy flywheel in the material universe (Daleth) losing inertia according to the laws of physics so that everything is actually slowing down.

This concept is proven in the greenhouse technology to those scientifically inclined. Longer or increased light exposure makes for faster growth. When Daleth ends in the parabolic time curve, the point in time is represented by Taw, which is the restoration accomplished by the unification of the dual Heh-Daleth polarities. The Heh and Daleth letters will disappear and merge into Taw linked to HANS will then be obsolete, too.

The good news is that the parabolic time dimension will be transformed into the Jod dimension when Jesus returns to earth and restores God's Kingdom on Earth. This event will add more light again like during the first creation days.

Bible prophecy points out that people will again live to be hundreds of years old like Abraham and his children in the Old Testament. This process happens gradually but can be seen by viewing many examples throughout the world. You don't even need a doctorate degree in theoretical physics to discover it. Just be a tourist and examine some of the ancient castle door frames that still survive from our past. If you notice, they are much smaller than those used today. If you don't notice, you be rewarded with a nice bump on your head. Also, the steel armor worn by knights was much smaller than could fit an average person today. We are growing larger again. It also connects to global warming.

God's presence on earth will make vegetable grow faster again so that more food is available to feed the growing third civilization population. That is projected by prophecy in the Bible - now explained scientifically in the website in our Forum Pearls.

The reversal has already started. People are getting bigger and older if you compare the armor suites of the Middle Age or the smaller doorways of ancient castles. Notice increasing global warming. Check out and understand why the IPK world standard platinum kilogram is becoming heavier, too. Many more discoveries are

showing up that cannot be explained by standard theories. Read all of the Babushka concept books adding to our knowledge horizon.

The Bible creation story actually ends in the last pages of Revelation with a redemptive plan for a defective and broken universe that is no longer useful. It is as static as the Heh-Daleth dimension - wrecked and polluted by Satan's rebellion in 4488 BC. It will soon be transformed into a new universe dimension finalized in Jod. This will ensure that the math-energy equations come out correctly.

The Creator has promised a future without death or pain. Satan's school of evil and unjust tyranny will be closed down at the end of the Apocalypse in 2015. That will change human civilization. For the first time, people will live in peace and prosperity without wars. It will be a good life for everyone.

After this thousand-year age of peace, everything will utterly pass away into a black hole. The time has come for another universe with much better with life cycles. The Saints will emerge to the liberated life like butterflies do from cocoons. The Bible predicts a totally different creation, much larger and more beautiful for those who qualify for the eternal life offered by Jesus Christ. God said there will be no more death, sickness and pain, He will then, personally, wipe away all of our tears to start life over again on a different planet prepared by God.
